

Innovation through standardization

Bluace is a Microsoft Solutions Partner and helps service- and project-oriented companies grow with Dynamics 365, Power Platform, and Azure. With our industry knowledge and innovative solutions, we translate technology into tangible results: more efficient processes, improved collaboration, and enhanced control over data.

Which processes are we automating?

- Order and work order management (from request to execution)
- Planning & assignment of technicians or teams
- Time and material entry on site
- Inventory and procurement management (items, parts)
- Invoicing and financial processing
- Reporting & insights (dashboards, KPIs)
- Connections & integrations between systems (e.g., ERP, CRM, field service)
- Workflow and approval processes (workflows, notifications)

How do we do that?

- Microsoft Dynamics 365 Business Central for central ERP processes
- Power Platform (Power Apps, Power Automate) for custom apps, automations, and workflows
- Azure cloud as a foundation for hosting, integrations, and smart scalability
- Specific modules/apps such as field service apps, inventory management modules, and planning tools
- APIs and links to existing systems (CRM, field service software)
